HOW cPCp DeliveryAlert WORKS

Based on order and contact information entered by you on the LabelForm, the software automatically sends a label file to the provider through email for printout on standard printing equipment. The sender then attaches the printout to the outside of the package. When the shipment arrives at your dock, the label is scanned and the cPCp DeliveryAlert Database is updated to reflect the date and time of receipt as well as the location. An email is automatically transmitted informing the requestor and the supplier of the shipment arrival details. No more wasted time on the phone tracking packages or fruitless searches at the wrong dock. Let **cPCp DeliveryAlert** do all of your legwork for you.

- **Simplified data entry capabilities - provision for email transmission with a single mouse click**
- **Database view available in commercial spreadsheet format as well as grid layout**
- **Archive of all created label files for easy reference**

LabelForm – DATA ENTRY FORM IS CONVERTED TO A LABEL FILE AND TRANSMITTED VIA EMAIL TO THE PROVIDER – WITH THE CLICK OF THE EMAIL BUTTON
